

NEWS UPDATE**(ME#23) Details Engineering of Piping System
and Process Equipment****April 23 - 26, 2013 | JW Marriott Hotel, Kuala Lumpur**

Traditionally there has been little formal training in this area and design decisions often have to be made based on practical considerations without formulae or code reinforcement. Completing piping drawings take up the majority of man-hours in the design of a process plant.

This course will be of interest to people who are employed in any area that piping is present, be it Refinery, Chemical, Power, Pulp & Paper, Utility and etc.

It shall introduce engineers, designers and construction personnel to the various procedures involved in the development & engineering of Piping and Instrumentation Diagrams (P&IDs), Equipment Plot Plans, Piping Arrangements and Fabrication Drawings. This is a course that will give attendees the background required to design, engineer and complete piping assignments.
